The new ratchet telescopic pipe cutter from ROTHENBERGER

Better cutting with the INOX TUBE CUTTER

Frankfurt/Kelkheim. The cutting of INOX stainless steel pipes place the highest demands on the HVAC craftsman. At ROTHENBERGER it has now reached a whole new quality. Presented for the first time at the ISH 2009, the further development of the ball bearing telescopic pipe cutter INOX TUBE CUTTER makes sure of this.

Since stainless steel pipes with a diameter up to 54 millimetres can be processed with the new INOX TUBE CUTTER, virtually the complete spectrum of domestic applications is covered with just one device. Additionally, the two guide rollers with recess make cutting near flares possible.

Because of the twelve-fold roller ball bearings, the guidance of the pipe been proven to be extremely stable, fast and safe. The precise roller guidance prevents the crushing of the roll and this way enables dent-free operation. The adjustment knob lets itself be turned easily, so that a quick adjustment of the operating range is possible. The ratchet telescopic guidance also makes sure of this with its automatic spring return. In the handle is both the retractable internal deburrer, as well as a spare cutter wheel. The metal casing made of magnesium attests to durability and extremely stable use.
